RAHUL CHERUKURI

Generative AI Engineer | Prompt Engineer

Email : rahulcherukuri6@gmail.com

Mobile : +91 91213 41957

Linked In : https://www.linkedin.com/in/rahul-cherukuri-5a0672212/

Summary:

AI/ML Engineer with experience developing enterprise AI solutions using Generative AI, **Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG).** Skilled in building intelligent assistants, knowledge retrieval systems, and conversational AI applications using **Python and Azure AI services.** Experienced in prompt engineering, embeddings, and vector search to develop scalable AI solutions that enhance business automation and decision-making.

Work Experience:

AI/ML Computational Science Associate | Accenture

Duration: Apr 2024 - Present

- Led the development of an **AI-powered email assistant chatbot** that analyzes and retrieves information from user email conversations, enabling users to ask natural language questions and receive context-aware responses.
- Designed and implemented a **Retrieval-Augmented Generation (RAG)** pipeline by processing email data, generating embeddings, and enabling semantic search to retrieve relevant information.
- Developed and optimized prompts as a **Prompt Engineer** to improve response accuracy, reasoning, and contextual understanding of **Large Language Models (LLMs).**
- Built Generative AI solutions and intelligent assistants using **Azure OpenAI Service** and Azure cloud infrastructure.

Achievements:

- Successfully designed and implemented AI-driven solutions including intelligent assistants and chatbot systems to automate information retrieval and improve productivity.
- Developed Generative AI–based applications using Large Language Models to enhance knowledge retrieval and conversational AI capabilities.
- Developed AI-powered chatbot systems for intelligent information retrieval.

Projects:

Billing Anomaly Detection – AT&T

- Designed and developed an AI-powered billing anomaly detection solution for telecom billing validation for AT&T.
- Built an intelligent system to extract and analyze data from both **scanned and digital billing documents** and validate them against contractual billing data stored in enterprise databases.
- Leveraged **Large Language Models (LLMs)** through Azure OpenAI Service to perform **document understanding, information extraction, and contextual analysis** from invoices and contracts.
- Implemented **AI-based document processing pipelines** to automate extraction of billing fields such as charges, service identifiers, contract terms, and pricing details.
- Developed workflows to **compare extracted invoice data with contract data** to detect discrepancies and identify billing anomalies
- **Technologies Used in Project:**
  Python, Azure OpenAI, LLMs, RAG, Prompting, OCR, Vector Databases, Azure AI Document Intelligence.

AI-Powered Claims & Policy Knowledge Chatbot – AON

- Developed an AI-powered **policy and claims knowledge chatbot** for insurance workflows for Aon to help users quickly access policy information, claims procedures, and coverage details.
- Designed conversational AI workflows using **Large Language Models (LLMs)** and retrieval-based architectures to enable accurate responses from enterprise policy documents.

- Implemented **AI agents capable of retrieving policy information from enterprise knowledge sources** and generating context-aware responses using Retrieval-Augmented Generation (RAG).
- Built embeddings-based semantic search to improve chatbot response accuracy for insurance policy queries.

AI Email Summarization & Response Assistant – AT&T

- Developed an AI-powered email assistant chatbot for AT&T to automatically summarize email conversations and generate contextual responses using Generative AI.
- Implemented **Large Language Models (LLMs)** through Azure OpenAI Service to analyze long email threads and generate concise summaries for faster information access.
- Designed prompt engineering strategies to enable **automatic response generation based on email context, intent, and conversation history**.
- Developed an interactive user interface using **Streamlit** to host the application and allow users to upload emails, view summaries, and generate automated reply suggestions.

Skill Set:

Languages	Python, C, SQL
Database	MySQL, Vector Databases
Gen AI Skills	Large Language Models (LLMs), Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Chatbot Development, Agentic AI, AI Agents,
Operating systems	Windows, Kali Linux, Ubuntu
Cloud & AI Platforms	Microsoft Azure, Azure AI Services, Azure Storage, Azure OpenAI
Tools	Git, REST APIs, OpenAI GPT APIs

Education:

➢ Information Technology, Bachelor of Technology, Andhra Loyola Institute Of Engineering And Technology (ALIET).
